October 6th, 2016

Data

First, we have to select a dataset from the ones already preloaded in R

```
### Listing the in-built dataset from R
```

```
data()
```

```
### Loading the dataset diamonds and obtaining its description
```

```
data(diamonds)
```

```
? diamonds
```

```
### Listing all the variables that the dataset contains
```

```
names(diamonds)
```

```
## [1] "carat" "cut" "color" "clarity" "depth" "table" "price"
```

```
## [8] "x" "y" "z"
```

```
### Getting a descriptive summary of the variables in the dataset
```

```
summary (diamonds)
```

```
##      carat      cut      color      clarity
## Min.   :0.2000 Fair      : 1610 D: 6775 SI1      :13065
## 1st Qu.:0.4000 Good      : 4906 E: 9797 VS2      :12258
## Median :0.7000 Very Good:12082 F: 9542 SI2      : 9194

## Max.   :58.900 Max.   :31.800
##
```

Histogram

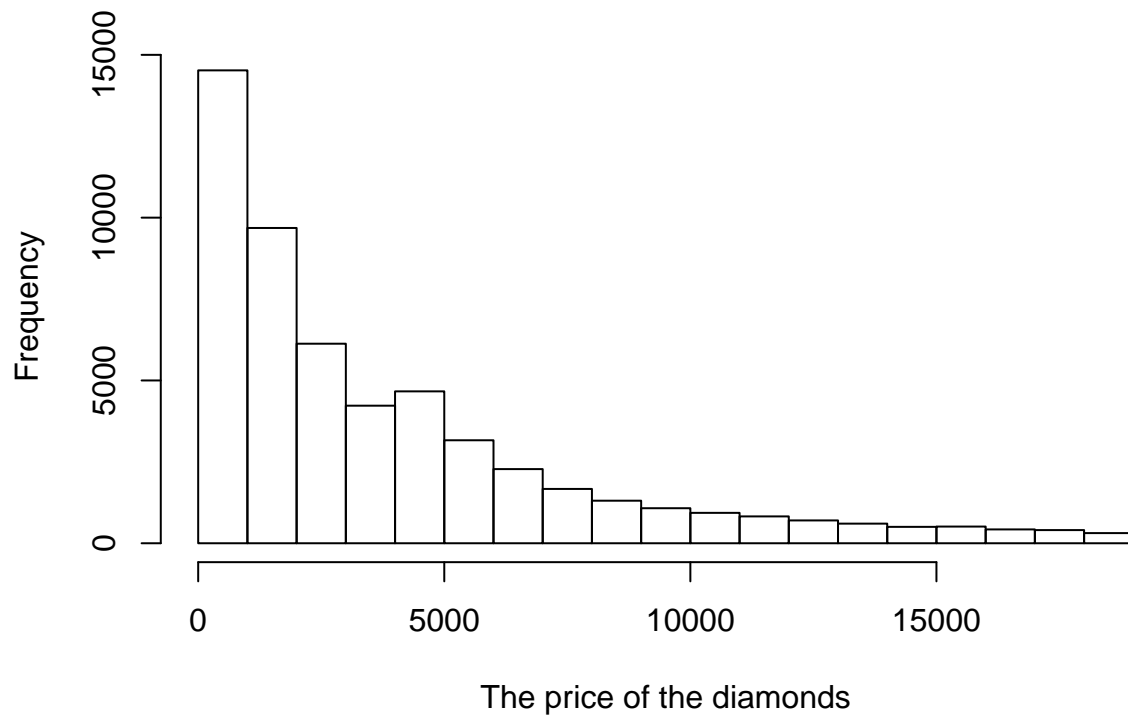

A histogram of price variable shows the number of diamonds at different price level

```
#### Create the histogram  
hist(diamonds$price)
```

```
hist(diamonds$price,  
      main = 'Diamonds at Different Price Levels',  
      xlab = 'The price of the diamonds')
```

Diamonds at Different Price Levels

Statistics

A series of commands will show us the different descriptive statistics to analyze the data

```
### Finding the mean, one of the main measures of central tendency  
mean(diamonds$price, na.rm = TRUE)
```

```
## [1] 3932.8
```

```
mean(diamonds$depth, na.rm = TRUE)
```

```
## [1] 61.7494
```

```
mean(diamonds$carat, na.rm = TRUE)
```

```
## [1] 0.7979397
```

```
mean(diamonds$table, na.rm = TRUE)
```

```
## [1] 57.45718
```

```
mean(diamonds$x, na.rm = TRUE)
```

```
## [1] 5.731157
```

```
mean(diamonds$y, na.rm = TRUE)
```

```
## [1] 5.734526
```

```
mean(diamonds$z, na.rm = TRUE)
```

```
## [1] 3.538734
```

```
### Finding the standard deviation for price variable  
sd(diamonds$price)
```

```
## [1] 3989.44
```

Tables

A Crosstab shows how two variables are related

```
### Crosstab shows that color and cut are roughly equally distributed  
table(diamonds$cut, diamonds$color)
```

```
##  
##           D      E      F      G      H      I      J  
## Fair      163   224   312   314   303   175   119  
## Good      662   933   909   871   702   522   307  
## Very Good 1513  2400  2164  2299  1824  1204   678  
## Premium   1603  2337  2331  2924  2360  1428   808  
## Ideal     2834  3903  3826  4884  3115  2093   896
```
